Position: Journeyman Electrician-Industrial

Purpose: Construction and maintenance of electrical systems in large, industrial buildings, including mills, factories, hydroelectric facilities, waste water treatment plants, etc.

Duties include but are not limited to;

- Following design, plans and blueprints in order to dig for and place conduit.
- Hanging 3"+ rigid conduit on factory walls and ceilings.
- Running wires or cables through conduit in order to complete circuits between power supply and boxes/switches, etc.
- Using testing equipment to check the circuits for proper connections, ensuring electrical compatibility and safety of components.
- Connecting motors to electrical power and installing electronic controls for industrial equipment.
- Repairing motors, transformers, generators, electronic controllers, etc.
- Inspecting equipment, and locating and correcting problems before breakdowns occur.
- Following strict safety procedures including customer/company safety standards, the National Electric Code, NFPA70E and complying with State and local building codes when installing systems.

Requirements:

- Current Washington General Journeyman license
- A clean driving record
- Industrial experience

Compensation:

Generous hourly rate, overtime, per diem, insurance, 401(k), bonuses, profit sharing and more!

Working Conditions:

Work is physical and sometimes strenuous, requiring manual dexterity, heavy lifting (50 lbs), climbing, bending, stooping, and the ability to work with hand tools and power tools. Position requires incumbent to frequently work on ladders and scaffolds. Work may be done in loud environments, in inclement weather (hot or cold), or in confined areas, ditches, etc.

Must be willing to travel and work extended hours and must be available for night and/or weekend work. Most job sites will be up and down the I-5 corridor.

We Are an Affirmative Action/Equal Opportunity Employer of females, minorities, protected veterans and qualified individuals with disabilities
